ABOUT THIS MANUAL

Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

SAFETY INSTRUCTIONS

WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- 1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
- 2. CAUTION --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- 4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
- 5. CAUTION Only qualified personnel can install this device with battery.
- 6. NEVER charge a frozen battery.
- 7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- 9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. Fuses (3 pieces of 40A, 32VDC for 1KVA, 4 pieces of 40A, 32VDC for 2KVA and 6 pieces for 3KVA, 1 piece of 200A, 58VDC for 4KVA and 5KVA) are provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. Warning!! Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, MPPT solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

Features

- Pure sine wave inverter
- Built-in MPPT solar charge controller
- Configurable input voltage range for home appliances and personal computers via LCD setting
- Configurable battery charging current based on applications via LCD setting
- Configurable AC/Solar Charger priority via LCD setting
- Compatible to mains voltage or generator power
- Auto restart while AC is recovering
- Overload/ Over temperature/ short circuit protection
- Smart battery charger design for optimized battery performance
- Cold start function

Basic System Architecture

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- Generator or Utility.
- PV modules (option)

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

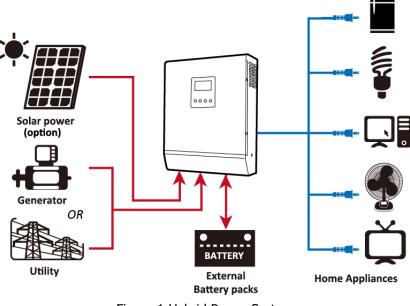

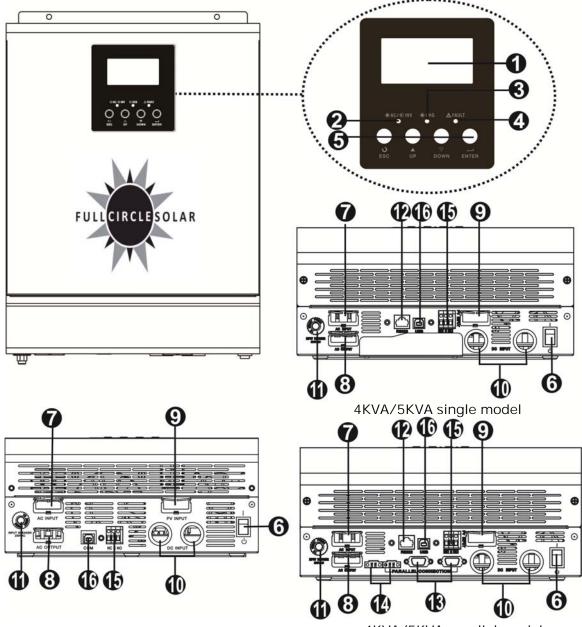

Figure 1 Hybrid Power System

Product Overview

1-3KVA model

NOTE: For parallel model installation and operation, please check separate parallel installation guide for the details.

- 4KVA/5KVA parallel model
- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function buttons
- 6. Power on/off switch
- 7. AC input
- 8. AC output
- 9. PV input
- 10. Battery input
- 11. Circuit breaker
- 12. RS232 communication port
- 13. Parallel communication cable (only for parallel model)
- 14. Current sharing cable (only for parallel model)
- 15. Dry contact
- 16. USB communication port

INSTALLATION

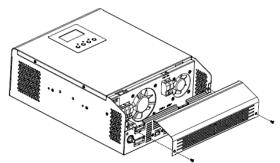

Unpacking and Inspection

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- The unit x 1
- User manual x 1
- Communication cable x 1
- Software CD x 1

Preparation

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

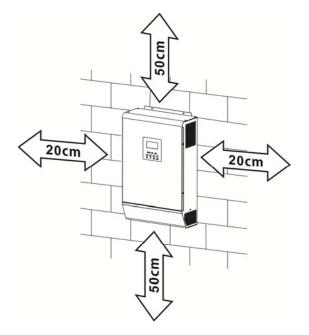

Mounting the Unit

Consider the following points before selecting where to install:

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the right diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

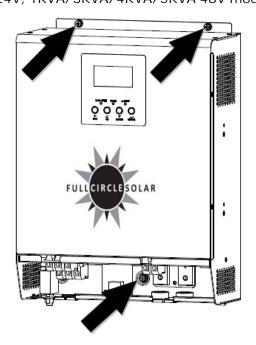

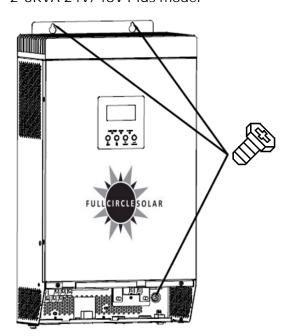

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing three screws. It's recommended to use M4 or M5 screws. 1-3KVA 24V, 1KVA/3KVA/4KVA/5KVA 48V model 2-3KVA 24V/48V Plus model

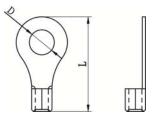

Battery Connection

CAUTION: For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

Ring terminal:

WARNING! All wiring must be performed by a qualified personnel. WARNING! It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.

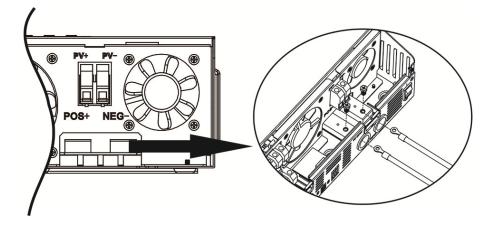

Recommended battery cable and terminal size:

Model	Typical	Battery	Wire Size	F	ing Termi	ing Terminal		
	Amperage	Capacity		Cable	Dimer	nsions	Value	
				mm ²	D (mm)	L (mm)		
1KVA 48V	20A	100AH	1*14AWG	2	6.4	21.8	2~ 3 Nm	
1KVA 24V, 2KVA 48V	33A	100AH	1*10AWG	5	6.4	22.5	2~ 3 Nm	
3KVA 48V	50A	100AH	1*8AWG	8	6.4	23.8	2~ 3 Nm	
2KVA 24V	66A	100AH	1*6AWG	14	6.4	29.2	2~ 3 Nm	
2KVA 24V	UUA	UUA	200AH	2*10AWG	8	6.4	23.8	Z∾ 3 NIII
3KVA 24V	100A	100AH	1*4AWG	22	6.4	33.2	2~ 3 Nm	
JKVA 24V	100A	200AH	2*8AWG	14	6.4	29.2	210 3 1011	
4KVA	120A	200AH	1*2AWG	38	6.4	39.2	2~ 3 Nm	
HNVA	120A	120A	ZUUAIT	2*6AWG	28	6.4	33.2	Z∾ 3 NIII
EV//A	1204	200AH	1*2AWG	38	6.4	39.2	2~ 3 Nm	
5KVA	A 120A		2*6AWG	28	6.4	33.2	2~ 3 NM	

Please follow below steps to implement battery connection:

- 1. Assemble battery ring terminal based on recommended battery cable and terminal size.
- 2. Connect all battery packs as units requires. It's suggested to connect at least 100Ah capacity battery for 1-3KVA model and at least 200Ah capacity battery for 4KVA/5KVA model.
- 3. Insert the ring terminal of battery cable flatly into battery connector of inverter and make sure the bolts are tightened with torque of 2-3 Nm. Make sure polarity at both the battery and the inverter/charge is correctly connected and ring terminals are tightly screwed to the battery terminals.

\wedge	WARNING: Shock Hazard
$\overline{\langle ! \rangle}$	Installation must be performed with care due to high battery voltage in series.
\wedge	CAUTION!! Do not place anything between the flat part of the inverter terminal and the ring
$\overline{\langle \cdot \rangle}$	terminal. Otherwise, overheating may occur.
	CAUTION!! Do not apply anti-oxidant substance on the terminals before terminals are
	connected tightly.
	CAUTION!! Before making the final DC connection or closing DC breaker/disconnector, be sure
	positive (+) must be connected to positive (+) and negative (-) must be connected to negative
	(-).

AC Input/Output Connection

CAUTION!! Before connecting to AC input power source, please install a separate AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 10A for 1KVA, 20A for 2KVA, 32A for 3KVA, 40A for 4KVA and 50A for 5KVA.

CAUTION!! There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

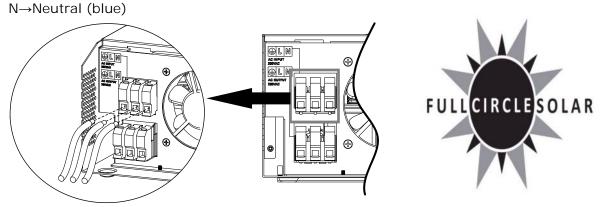

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below. Suggested cable requirement for AC wires

<u></u>		
Model	Gauge	Torque Value
1KVA	16 AWG	0.5~ 0.6 Nm
2KVA 230VAC	14 AWG	0.8~ 1.0 Nm
2KVA 120VAC	12 AWG	1.2∼ 1.6 Nm
3KVA	12 AWG	1.2~ 1.0 Mill
4KVA	10 AWG	1.4~ 1.6Nm
5KVA	8 AWG	1.4~ 1.6Nm

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.
- 3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor () first.

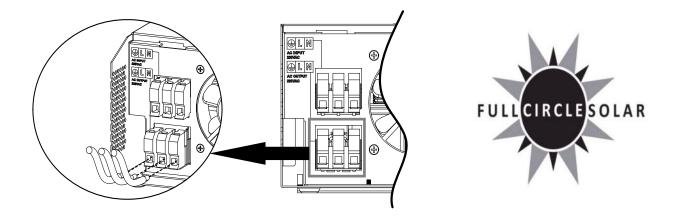

WARNING: Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

 Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor (
) first.

Ground (yellow-green)

 $L \rightarrow LINE$ (brown or black)

N→Neutral (blue)

5. Make sure the wires are securely connected.

CAUTION: Important

Be sure to connect AC wires with correct polarity. If L and N wires are connected reversely, it may cause utility short-circuited when these inverters are worked in parallel operation.

CAUTION: Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

PV Connection

CAUTION: Before connecting to PV modules, please install separately a DC circuit breaker between inverter and PV modules.

WARNING! All wiring must be performed by a qualified personnel. WARNING! It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Model	Typical Amperage	Cable Size	Torque
1KVA 24V / 2KVA 24V/ 3KVA 24V	25A	12 AWG	1.2~1.6 Nm
1KVA 48V / 3KVA 48V	18A	14 AWG	1.2~1.6 Nm
2KVA 24V Plus			
3KVA 24V Plus			
2KVA 48V Plus	60A	8 AWG	1.4~1.6 Nm
3KVA 48V Plus			
4KVA / 5KVA			

PV Module Selection:

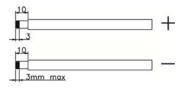

When selecting proper PV modules, please be sure to consider below parameters:

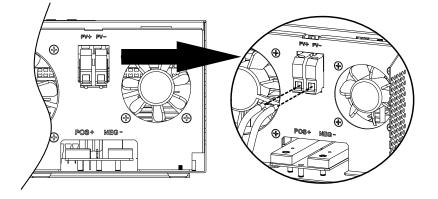

- 1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
- 2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

Solar Charging Mode				
	1KVA 24V	1KVA 48V	2KVA 24V	2KVA 48V
INVERTER MODEL	2KVA 24V	3KVA 48V	Plus/ 3KVA	Plus/3KVA 48V
	3KVA 24V	3KVA 40V	24V Plus	Plus/ 4KVA/5KVA
Max. PV Array Open Circuit Voltage	75Vdc max	102Vdc max	14	45Vdc
PV Array MPPT Voltage Range	30~66Vdc	60~88Vdc	30~115Vdc	60~115Vdc
Min. battery voltage for PV charge	17Vdc	34Vdc	17Vdc	34Vdc

Please follow below steps to implement PV module connection:

- 1. Remove insulation sleeve 10 mm for positive and negative conductors.
- Check correct polarity of connection cable from PV modules and PV input connectors. Then, connect positive pole (+) of connection cable to positive pole (+) of PV input connector. Connect negative pole (-) of connection cable to negative pole (-) of PV input connector.

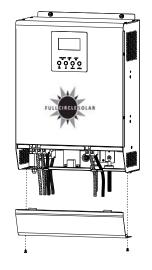

3. Make sure the wires are securely connected.

Final Assembly

After connecting all wirings, please put bottom cover back by screwing two screws as shown below.

1KVA/2KVA/3KVA/4KVA/5KVA

Communication Connection

Please use supplied communication cable to connect to inverter and PC. Insert bundled CD into a computer and follow on-screen instruction to install the monitoring software. For the detailed software operation, please check user manual of software inside of CD.

Dry Contact Signal

There is one dry contact (3A/250VAC) available on the rear panel. It could be used to deliver signal to external device when battery voltage reaches warning level.

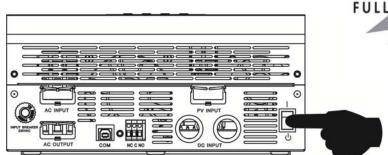

Unit Status			(Condition	Dry conta	ct port: NC C NO

OPERATION

Power ON/OFF

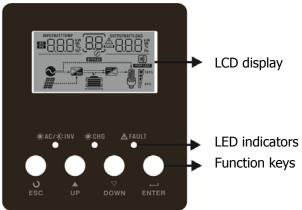

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

Operation and Display Panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

LED Indicator

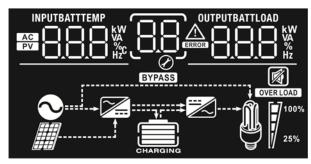

LED II	ndicator		Messages
¥AC∕¥INV	Green	Solid On	Output is powered by utility in Line mode.
	Green	Flashing	Output is powered by battery or PV in battery mode.
🔆 CHG	Croon	Solid On	Battery is fully charged.
- 	Green	Flashing	Battery is charging.
A FALLET	Ded	Solid On	Fault occurs in the inverter.
▲ FAULT	Red	Flashing	Warning condition occurs in the inverter.

Function Keys

Function Key	Description
ESC	To exit setting mode
UP	To go to previous selection
DOWN	To go to next selection
ENTER	To confirm the selection in setting mode or enter setting mode

LCD Setting

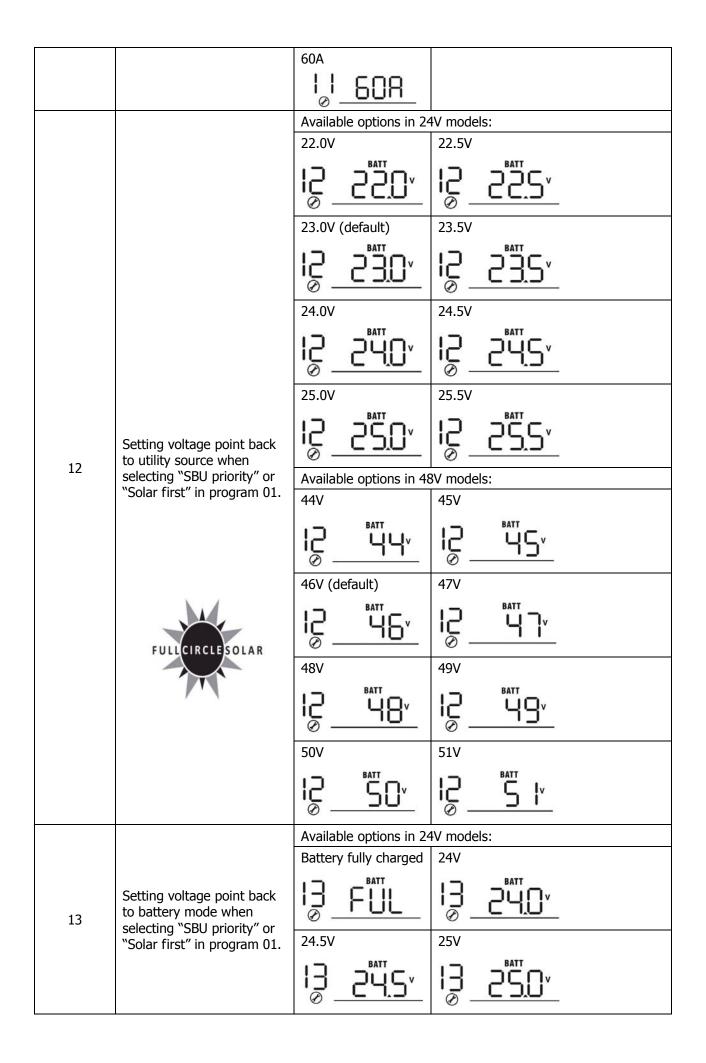

After pressing and holding ENTER button for 3 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" button to confirm the selection or ESC button to exit.

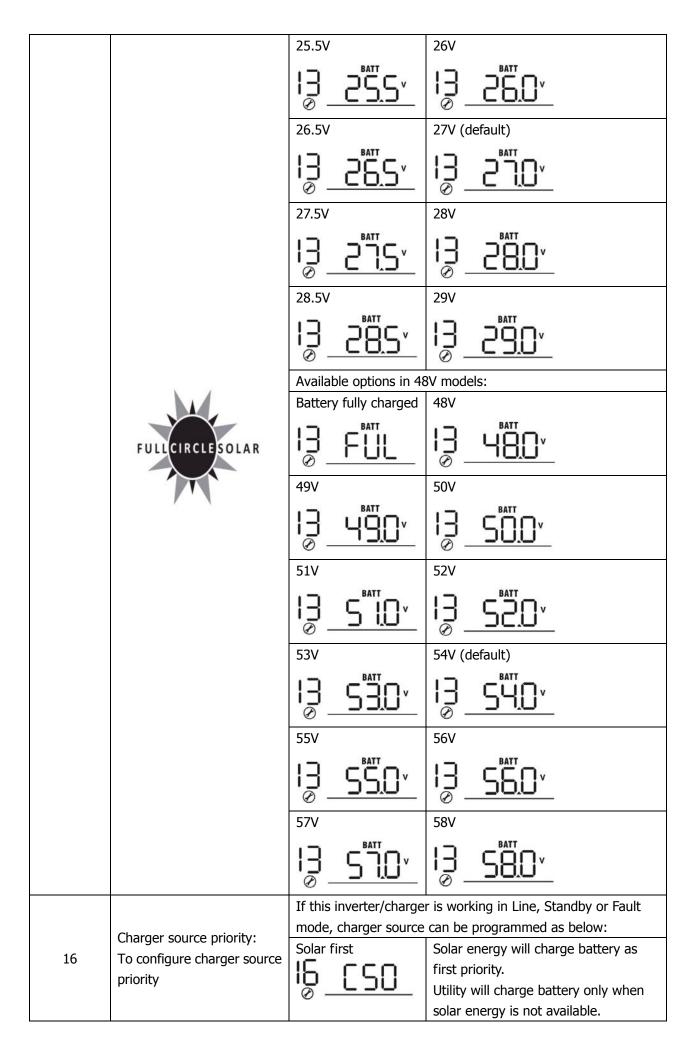

Setting Progr Program	Description	Selectable option	
	•	Escape	
00	Exit setting mode	0 <u>0 ESC</u>	
		Solar first	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power the loads at the same time. Utility provides power to the loads only when any one condition happens: - Solar energy is not available - Battery voltage drops to either low-level warning voltage or the setting point in program 12.
01	Output source priority: 01 To configure load power source priority	Utility first (default)	Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.
		SBU priority	Solar energy provides power to the loads as first priority. If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 12.
	Maximum charging current: To configure total charging current for solar and utility chargers. (Max. charging current = utility charging current + solar charging current)		KVA 24V and 1KVA/3KVA 48V models: 20A (default) 20A (default)

		48V model default setting: 56.4V
	FULLCIRCLESOLAR	If self-defined is selected in program 5, this program can be
		set up. Setting range is from 24.0V to 29.2V for 24V model and 48.0V to 58.4V for 48V model. Increment of each click is 0.1V.
		24V model default to 27.0V
27	Floating charging voltage	48V model default setting: 54.0V
		If self-defined is selected in program 5, this program can be set up. Setting range is from 24.0V to 29.2V for 24V model, 48.0V to 58.4V for 48V model. Increment of each click is 0.1V.
	Low DC cut-off voltage	24V model default setting: 21.0V
29		48V model default setting: 42.0V
		If self-defined is selected in program 5, this program can be set up. Setting range is from 20.0V to 24.0V for 24V model, 40.0V to 48.0V for 48V model. Increment of each click is 0.1V. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected.
	Solar power balance: When enabled, solar input	Solar power balance enable (Default):
31	power will be automatically adjusted according to connected load power. (Only available for 4KVA/5KVA model)	Solar power balance disable:

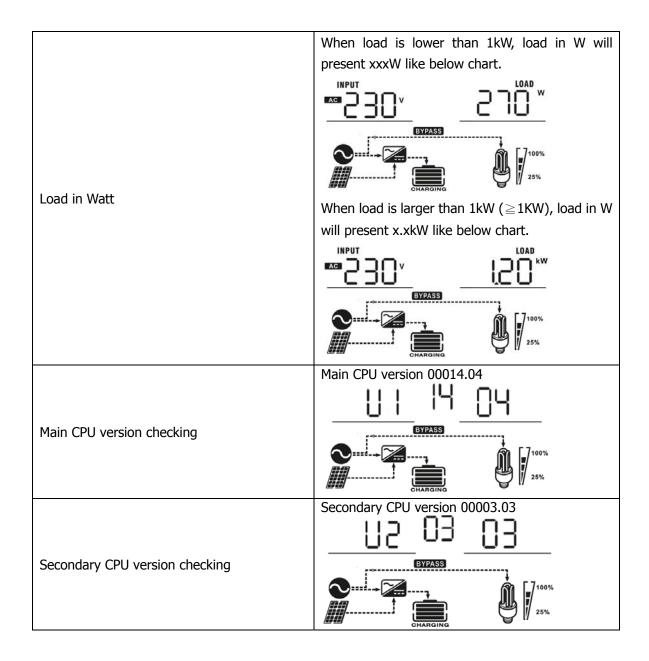

Display Setting

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as below order: input voltage, input frequency, PV voltage, MPPT charging current, MPPT charging power, battery voltage, output voltage, output frequency, load percentage, load in VA, load in Watt, DC discharging current, main CPU Version and second CPU Version.

Selectable information	LCD display
	Input Voltage=230V, output voltage=230V
Input voltage/Output voltage (Default Display Screen)	
Input frequency	Input frequency=50Hz
PV voltage	PV voltage=60V
MPPT Charging current	Current $\geq 10A$ $\square 25R$ $\square 230^{v}$
MPPT Charging power	MPPT charging power=500W

	Battery voltage=25.5V, discharging current=1A
Battery voltage/ DC discharging current	
	Output frequency=50Hz
Output frequency	
	↓ 25%
	Load percent=70%
Load percentage	<u> </u>
	When connected load is lower than 1kVA, load in VA will present xxxVA like below chart.
	2 <u>55</u> 350 ¹
Load in VA	When load is larger than 1kVA (\geq 1KVA), load in
	VA will present x.xkVA like below chart.
	<u> 25.5 </u>

Operating Mode Description

Operation mode	Description	LCD display
Standby mode / Power saving mode Note: *Standby mode: The inverter is not turned on yet but at this time, the inverter can charge battery without AC output. *Power saving mode: If enabled, the output of inverter will be off when connected load is pretty low or not detected.	No output is supplied by the unit but it still can charge batteries.	Charging by utility.
Fault mode Note: *Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	PV energy and utility can charge batteries.	Charging by utility. (Only available in 1K/2K/3K model) Charging by PV energy. Charging by PV energy. No charging.
Fault mode Note: *Fault mode: Errors are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	Utility can power loads when the unit starts up without battery. (Only available in 4K/5K model with single operation)	Power from utility
Line Mode	The unit will provide output power from the mains. It will also charge the battery at line mode.	Charging by PV energy

		EYPASS
Battery Mode	The unit will provide output power from battery and PV	Power from battery and PV energy.
	power.	Power from battery only.

Fault Reference Code

Fault Code	Fault Event	I con on
01	Fan is locked when inverter is off.

INVERTER MODEL		1KVA 24V 2KVA 24V Plus 120Vac	2KVA 24V 3KVA 24V 2KVA 24V Plus 3KVA 24V Plus	2KVA 48V Plus 120Vac	1KVA 48V 3KVA 48V 2KVA 48V Plus 3KVA 48V Plus		
Charging Current (UPS) @ Nominal Input Voltage		10/20A	20/30A	5/10A	10/15A	2/10A/ 20/30A/ 40/50/60A	
Bulk Bulk Battery			29.2	58.4			
Charging Voltage	AGM / Gel Battery	28.2		56.4			
Floating Ch	arging Voltage	27Vdc		54Vdc			
Charging A	Igorithm	3-Step					
Charging Curve			er cell	Main	Charging Current, % Voltage 100% 50% Current Time oating)		

Solar Charging Mode					
INVERTER MODEL	1KVA 24V 2KVA 24V 3KVA 24V	1KVA 48V 3KVA 48V	2KVA 24V Plus 3KVA 24V Plus	2KVA 48V Plus 3KVA 48V Plus 4KVA 5KVA	
Rated Power	600W	900W	1500W	3000W	
Efficiency	98.0% max.				
Max. PV Array Open Circuit Voltage	75Vdc max	102Vdc max	145Vdc		
PV Array MPPT Voltage Range	30~66Vdc	60~88Vdc	30~115Vdc	60~115Vdc	
Min battery voltage for PV charge	17Vdc	34Vdc	17Vdc	34Vdc	
Standby Power Consumption	2W				
Battery Voltage Accuracy	+/-0.3%				
PV Voltage Accuracy	+/-2V				
Charging Algorithm	3-Step				

Joint Utility and Solar Charging (Only available for 4KVA and 5KVA model)				
Max Charging Current	120Amp			
Default Charging Current	60Amp

TROUBLE SHOOTING

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do	
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low (<1.91V/Cell)	 Re-charge battery. Replace battery. 	
No response after power on.	No indication.	 The battery voltage is far too low. (<1.4V/Cell) Battery polarity is connected reversed. 	 Check if batteries and the wiring are connected well. Re-charge battery. Replace battery. 	
	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.	
Mains exist but the unit works in battery mode.	Green LED is flashing.	Insufficient quality of AC power. (Shore or Generator)	 Check if AC wires are too thin and/or too long. Check if generator (if applied) is working well or if input voltage range setting is correct. (UPS→Appliance) 	
	Green LED is flashing.	Set "Solar First" as the priority of output source.	Change output source priority to Utility first.	
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.	
	Fault code 07	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.	
		Output short circuited.	Check if wiring is connected well and remove abnormal load.	
	Fault code 05	Temperature of internal converter component is over 120°C. (Only available for 1-3KVA models.)	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.	
	Fault code 02	Internal temperature of inverter component is over 100°C.		
		Battery is over-charged.	Return to repair center.	
Buzzer beeps continuously and	Fault code 03	The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.	
red LED is on.	Fault code 01	Fan fault	Replace the fan.	
	Fault code 06/58	Output abnormal (Inverter voltage below than 190Vac or is higher than 260Vac)	 Reduce the connected load. Return to repair center 	
	Fault code 08/09/53/57	Internal components failed.	Return to repair center.	
	Fault code 51	Over current or surge.	Restart the unit, if the error happens again, please return	
	Fault code 52	Bus voltage is too low.		
	Fault code 55	Output voltage is unbalanced.	to repair center.	
	Fault code 56	Battery is not connected well or fuse is burnt.	If the battery is connected well, please return to repair center.	

Appendix: Approximate Back-up Time Table

Model	Load (VA)	Backup Time @24Vdc 100Ah (min)	Backup Time @24Vdc 200Ah (min)
	200	766	1610
